

Burien Transit Center Park-and-Ride Garage

The Burien Park-and-Ride Garage is located adjacent to Burien Transit Center. The garage has a total of 504 parking stalls both inside the five-floor garage and in the surface lot immediately to the north. These parking spaces include 10 electric-vehicle spaces on the first floor of the garage and room for 40 additional recharging stations throughout the garage that are equipped with pay meters and credit card readers. In the outside lot, there are accessible parking stalls, some large enough for vans and also kiss-and-ride drop-off spots. The new facility has 161 more parking spaces than the former park-and-ride.

Emergency-alarm stations and security cameras are located in each corner of every floor in the garage. Bike racks are located between the surface parking area and the transit center.

The garage was constructed on the site on the former Burien Park-and-Ride lot, which was originally opened in 1978.
